DESCRIPTORS: *Phagocytosis, *Typhoid, Leukocytes, Corticosteroids, Antibiotics.

Sixty-eight typhoid patients were treated to determine the effectiveness of various treatments on phagocytosis. In most patients, a favorable course of convalescence progressed. Phagocytosis of the typhoid bacilli was found to be about twice as intense as that of the Shigella sonnei. A second examination showed a decrease in phagocytosis of Sonne's bacilli to normal levels and a marked increase regarding typhoid microbes in patients whose convalescence was favorable.
